

## Cisco Identity Services Engine (ISE) Implementation Services

C2 Company's ISE Implementation Services can include some or all of the following:

- Configuration of Authentication, Authorization, Accounting (AAA), Posture, and Profiler
- Configuration of support for discovery, profiling, policy-based placement, and monitoring of endpoint devices on the network
- Mobile Device Management with Zero-Touch On-Boarding
- Configuration to enforce endpoint compliance, for all endpoints that access the network, including 802.1x environments, providing comprehensive client provisioning measures and device posturing.
- Configuration for support of discovery, profiling, policy-based placement, and monitoring of endpoint devices on the network.
- Configure for consistent policies in centralized and distributed deployments; allowing for services to be delivered where they are needed.
- Provide for ongoing support and/or maintenance

Employees demanding the use of their own devices, insisting on more flexibility in the way they work, as well as when and where they work, are an ever increasing issue in the today's work place. Businesses supporting employee "**bring-your-own-device**" or **BYOD** practices also need to provide more secure access to their networks.

Cisco's **Identity Services Engine (ISE)** is a context-aware, identity-based platform that can reliably enforce compliance, enhance infrastructure security, and streamline service operations, thereby assisting IT in obtaining its goal of providing BYOD support for employees while keeping resources secure.

C2 Company is a **Certified ISE Authorized Technical Provider (ATP)** and has the technical expertise that can make all the difference in a successful ISE design and Implementation.

# Cisco Identity Services Engine (ISE) Implementation Services

With C2 Company's *over 20 years of network and security experience*, we use proven methods for the design, architecture and implementation of advanced technologies, such as Cisco's ISE.

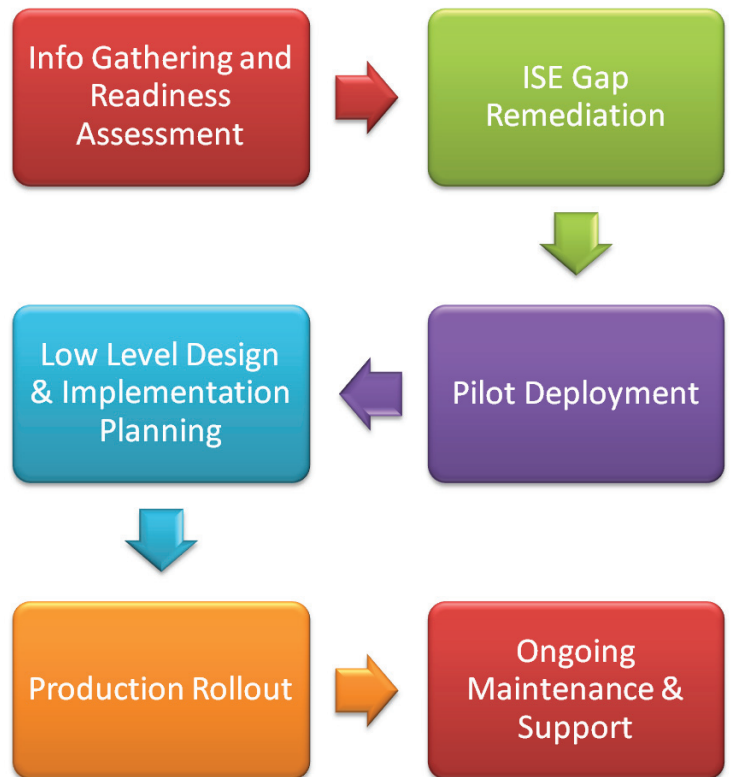

Our technical consultants can design and implement an ISE solution that goes beyond basic BYOD connectivity by including enhancements such as *Zero-touch On-boarding*, and *Mobile Device Management (MDM)*.

C2 Company's ISE Implementation Services provides our customers with the ability to *promote productivity* by enabling their employees to use their personal smartphones, tablets or laptops to perform company work, when and where they want.

Our ISE designs and configurations *incorporate Cisco's TrustSec with Secure Group Access (SGA)*, allowing our customer's employees to enjoy the convenience of using their personal devices without compromising the security of the company network.

C2 Company's ISE implementation services uses a phased approach, and includes the *ISE Readiness Assessment, High Level Design, and Low Level Design* required by Cisco for an ISE deployment.

With great knowledge and expertise in networks and network security, as well as VMware, C2 Company is perfectly positioned as the *go-to partner* for any Cisco ISE design and implementation.

## Why Choose C2 Company?

C2 Company has *over 20 years experience* in building and troubleshooting networks and are experts in network security.

Our team of certified experts have designed, built and managed thousands of complex networks.
